

# Management Systems

Effective safety, quality and environmental management is not merely about meeting standards. You need to have the right capability, organisational structure and culture in place. We are experienced in ensuring your organisation achieves just that.

## Background

A systematic approach to the management of quality, health and safety and the environment makes managing your business easier and more effective. By working out the best way to consistently deliver each key activity can reduce errors, improve processes, increase competitiveness and ultimately boost your profits.

## What we can do

Through our carefully selected partners, we provide support tailored to your company's requirements. From undertaking site reviews, assessments and audits to creating procedures, policies and documentation together we can achieve a fully compliant and easy to maintain management system.

## Types of management system

We can help with:

- Quality management systems up to and including ISO9001:2008
- Environmental management systems up to and including ISO14001:2004

- Health and Safety management systems up to and including ISO18001:2007 / BS8555Acom
- Integrated management systems PAS99 (Publicly available specification)
- Utilities Vendor Database (UVDB) verify.

## Benefits to you

- Better business performance through understanding and optimisation of business processes
- Enhanced environmental performance and reduction of environmental risk
- Improved health and safety performance leading to reduced risk of accidents and hazards
- Increased competitiveness and demonstrable systems for Pre-Qualification Questionnaire (PQQ) and Invitation to Tender (ITT) submissions
- Supply chain compliance.
